

## FRUIT 'n NUTS 2020

Our chosen varieties are selected for their history of producing well and maintaining high health.

Many of our young fruit trees have been grown in our open-ground nursery using natural methods, where there is no use of chemical pesticides or artificial fertilisers. We also supply plants bought in from other specialist nurseries and we do not have details of their growing practices. Potted plants (in PBs) have slow release pellet fertiliser in their mix.

**Please specify if you prefer only organically grown plants.**

NOTE	CODE
<b>OG</b> (bare rooted) plants are available in winter from July through to late August only. They can be ordered any time.	<b>med</b> medium sized fruit.
<b>PB &amp; RT</b> stock available most of the year, ie Chilean guavas, edible Holm oaks, feijoas, lemons, olives, pinenuts and pomegranates.	<b>mid</b> fruits in middle of fruiting season for that plant.
Other new season plants become ready from October through to April depending on variety.	<b>OG</b> grown in open ground, bare rooted.
	<b>PB</b> grown in plastic planter bag.
	<b>POL</b> pollinator for that variety.
	<b>PVR</b> protected from duplication by Plant Variety Rights & incurs a royalty fee.
	<b>RT</b> grown in root trainers.
	<b>SF</b> self fertilising.
	<b>S/O</b> sold out for this season.

**APPLES** OG (sold bare-rooted mid June to August) \$31  
Potted, \$32.50 (additional cost from \$3.50 extra according to pot size)

Our apple stocks are 1 and 2 year olds from 75cm to 1.7m+ tall and are available in varying numbers so order early to get the variety you prefer. All apples are sold bare-rooted unless requested otherwise. Potted price as above. Apples need another apple as a pollinator and this can be over about 30 metres, or 100 feet. Any neighbourhood tree will do the trick. Apples fruit within 3 to 6 years or less.

### ROOTSTOCKS

**M27 - Dwarf** rootstock, virus resistant, ideal for home gardens, early bearers growing 2m tall

**MM102** (larger) - **Dwarf** rootstocks, virus resistant, ideal for home gardens, early bearers growing 2 to 3m tall

**MM106 - Semi-dwarf** rootstock produces a medium sized tree 3 to 4m (+ in Taranaki) with a short time until bearing. Ideal for home gardens and suitable for cordons and espalier. Resistant to woolly aphids.

**Most apples are on the MM106.** Rootstocks for specific varieties are available as listed while stocks last.

VARIETY	CHARACTERISTICS	ROOTSTOCK
<b>Ballarat</b>	Large green red blush, white flesh, vigorous, abundant, late, cooker, stores well, healthy.	106
<b>Braeburn</b>	Medium, mid season, red striped over green, tangy flavour, dessert, good cooker.	M27 106

**CRABAPPLE Malus Jack Humm (Grafted)** 1.7m+ \$31  
Rounded tree, holds glossy red fruit well winter, single white flower, 4m.

**APRICOT** These varieties have low chilling requirements. Suitable for North Island on Peach stock. \$31

**Fitzroy** From New Plymouth, med, late, golden, heavy cropper, self fertile.

**Royal Rosa** Early freestone, gold flesh, yellow skin red blush, firm tasty.

**BLUEBERRIES** Prefer average to acid moist soils, organic leaf matter and winter chill, PB5 \$16

**(Specific types)** cross pollination assists good crops, can be grown as a hedgerow.  
To ensure the best flavour leave fruit on bush for 7-10 days after turning blue.

**Northern High bush (NE USA)**

Prefer cooler southern NZ districts, earliest to ripen - mid Nov to Feb, upright, deciduous, self pollinator although larger berries when planted with other Highbush varieties up to 6m.

**Atlantic** N.Highbush Mid season, heavy producer, medium sized firm aromatic fruit, spreading habit.

**Burlington** N.Highbush Late small-medium light blue fruit.

**Dixi** N.Highbush Vigorous spreading, late, large aromatic fruit.

**Blue Jay** N.Highbush Very large berries, mid season

**Rabbiteye (SE USA)**

Warmer districts, evergreen, upright, more vigorous, higher yields, mid Jan to mid April, needs pollinator, 3m x 2m.

**Blue Dawn** Rabbiteye Large tasty fruit ripens over summer, pink tinged cream flowers spring.

**Tasty Blue** Rabbiteye Large delicious fruit.

**Tif Blue** Rabbiteye Large fruit, vigorous, cold hardy. POL other rabbiteye varieties

**Southern Highbush (Sthn USA)**

Waikato north as frosts may damage early flowers, hybridised for low chill, heat tolerance & soil adaptability, self pollinator although larger berries when planted with other Sthn Highbush varieties, 2m.

**Misty** Southern Highbush May fruiting, large berries, evergreen, high yield, for northern districts

**BOYSENBERRIES** Vigorous, prolific cropper, ripe in December PB5 \$15

**CHERRIES** Grafted on to semi-dwarf rootstock. 1m – 1.7m. Grades according to availability OG \$31

**Compact Stella** Compact tree, dark skinned fruit late Dec /Jan, self fertile.

**Tangshe** Pale pink fruit late Oct /Nov with pink blossom, self fertile.

**Lapins** Large firm dark red sweet late, self fertile.

**CHILEAN GUAVA (Myrtus ugni) "Tazzie Berry"**

Sometimes called the NZ cranberry. Small evergreen shrub with round fragrant red berry-like fruit, about 10mm in diameter with a sharp pleasant flavour. Eat off the bush or use in pies, jellies & sauces. YUMMY!

Attractive clipped hedge. Easy care and produces large crops. Uncut height to 1.5m PB3 \$5.00 or 5 for \$24

<b>CRANBERRY</b>	Fruit on upright stems April, sweeten with first frosts, store well, up to 5 months. Health properties.		
<b>Bergman</b>	/ Self fertile, low trailing ground cover or curtain forming plants, green leaves turn purple winter, \ evergreen, runners up to 2m length.		1 Litre pot \$5
<b>CURRENTS BLACK</b>	Deep acid moist soil, sun or semi shade, fruiting on new wood after pruning,		
<b>Goliath</b>	Vigorous, large berries, 1.5m.		OG \$5.00 or 5 for \$24
<b>Magnus</b>	Large berries, Dec – Jan, 1.8m.		
<b>CURRENT RED</b>	<b>Gloria de Versailles</b> Fruits on older wood, large red berries, vigorous, Dec - Jan, 2m.		
	<b>Mangatoki</b> Vigorous, prolific, small berries, December.		
<b>ELDERBERRIES</b>	Champagne varieties Adams & Nova, healthy and vigorous. Flower Dec - Jan, 3m.		OG \$6
<b>FEIJOA</b>	Up to 3 years to bear fruit, ornamental red pohutukawa-like flowers, sunny site.		
<b>Apollo</b>	Self fertile, mid to late, med/large good quality fruit, slow growing, sun or shade, 2-3m.		\$18
<b>Mammoth</b>	Earlier fruiting, requires cross pollination with Triumph, 1.8m.		PB5 \$18
<b>Sellowiana</b>	<b>Seedling plants</b> - Ideal for a hedge row crop, less fruit 3m.		\$57/10 PB3 \$6
<b>Triumph</b>	Later fruiting, requires cross pollination with Mammoth, 1.8m.		PB5 \$18
<b>Unique</b>	Self fertile with large fruit, good crops from young plant, 2m+.		PB6.5 \$18
<b>FIGS Ficus carica</b>		OG 1yr old \$7	OG Large grades 9.50
	The Brown Turkey figs have heavy crops, brown fruit, large spreading tree, good for drying & jam, hardy, 5m.		
<b>Lebanon</b>	(Brown Turkey type) Late season, green skin, unattractive to birds.		
<b>Striped Fig</b>	(Brown Turkey type) Amber, heavy cropper.
